Summary

DevOps Engineer with 11 years of IT experience, including **4+ years in Azure Cloud, DevOps, and Infrastructure Automation, along with 6+ years in Telecom Operations.** Experienced in Azure, Terraform, Kubernetes, Docker, Jenkins, Ansible, Linux, and CI/CD. Proven expertise in automation, cloud infrastructure, DevSecOps, and delivering secure, scalable, and reliable solutions.

Professional Experience

- Having 4+ years of experience in Azure Cloud, DevOps, DevSecOps, SRE, Platform Engineering, and Infrastructure Automation.
- Managed DEV, QA, UAT, Pre-Production, and Production environments, ensuring high availability and operational stability.
- Provisioned and managed Azure resources including Virtual Machines, VM Scale Sets, VNets, Load Balancers, Application Gateways, Storage Accounts, DNS Zones, Azure Functions, and Backup Services.
- Developed and implemented Infrastructure as Code(IaC) solutions using Terraform for automated and scalable cloud deployments.
- Developed and maintained CI/CD pipelines using Jenkins, automating build, testing, deployment and release process.
- Integrated DevSecOps tools such as Tfsec, TFLint, TruffleHog, Terratest, and Super-Linter into CI/CD pipelines to enhance security and code quality.
- Implemented monitoring and observability solutions using Prometheus and Grafana for applications, containers, and infrastructure.
- Automated infrastructure provisioning and operational tasks using Python, Shell Scripting, and Ansible.
- Containerized and deployed applications using Docker, managing images, containers, volumes, and networking.
- Worked with Git, GitHub, Jira, SonarQube, MySQL, Tomcat, Nginx, Nagios, and other DevOps ecosystem tools.
- Collaborated with Development, QA, Security, and Operations teams to deliver scalable, secure, and highly available solutions.
- Managed Linux-based environments (RHEL and Ubuntu) and implemented cloud-native solutions on Azure.
- Participated in Agile/Scrum ceremonies including Sprint Planning, Daily Stand-ups, Sprint Reviews, and Retrospectives.

Skills

Containerizations
Docker, Kubernetes,
Helm Charts

CI/CD
Jenkins, GitHub-Actions,
Azure DevOps

Monitoring and logging tools
Prometheus, Grafana

Ticketing tool
ServiceNow, JIRA

Operating System
Linux, Ubuntu,
Windows

Source Code Management
Git, Azure DevOps,
GitHub

Deployment Tools and Servers
Apache Tomcat, Nginx

DevSecOps Tools
Tfsec, TFLint,
TruffleHog, Terratest,
Super Linter

Scripting
Shell, Bash, Python,
YAML

Configuration Management Tools
Ansible.

Cloud
Azure, Azure Monitor,
Azure Key Vault, Azure
Container Registry

IaC Tools
Terraform,
ARM Templates

Projects

Company: Jio Platforms Limited

Project: IMS MRF Node Deployment

Description of Project: Designed and automated IMS MRF node deployments on Azure using Kubernetes, CI/CD, and DevSecOps practices.

- Reduced deployment time by implementing automated **CI/CD pipelines using Jenkins**, enabling faster and more reliable releases.
- **Improved code quality** and minimized production issues by enforcing SonarQube quality gates across multiple technology stacks.
- **Increased deployment consistency** and application portability through Docker-based containerization and centralized image management.
- **Reduced manual effort** and accelerated infrastructure provisioning by implementing automation using **Terraform, Ansible, Python**, and Shell scripting.
- Strengthened security and compliance by integrating **DevSecOps tools into CI/CD pipelines** for continuous vulnerability assessment.
- Enhanced secrets management and reduced security risks through centralized configuration management using Azure Key Vault and Azure App Configuration.
- Improved system availability and performance through proactive administration, monitoring, and optimization of Linux servers and Azure Database for PostgreSQL.
- Enhanced observability and incident response capabilities by implementing Azure Monitor-based monitoring, alerting, and logging solutions.
- Increased operational efficiency by standardizing deployment processes, automation workflows, and infrastructure management practices.
- Enabled faster and more secure software delivery through close collaboration with Development, QA, and Operations teams in Agile environments.

Company: Marquistech Pvt. Ltd.

Project: Enterprise CI/CD and Infrastructure Automation on Azure

Description of Project: Designed and implemented Azure CI/CD pipelines and infrastructure automation for scalable and efficient application delivery.

- Reduced deployment time from **2 hours to less than 15 minutes** through Jenkins CI/CD automation.
- Accelerated infrastructure provisioning and improved consistency using **Terraform-based IaC**.
- Improved deployment reliability and environment consistency through **Docker containerization**.
- Increased operational efficiency by automating provisioning and configuration management with **Ansible**.
- Enhanced application availability through proactive monitoring and alerting using **Grafana and Azure Monitor**.
- Reduced incident resolution time through effective troubleshooting and root cause analysis.
- Improved scalability and operational agility by supporting successful **Azure cloud migration** initiatives.
- Streamlined release processes through effective collaboration with Development and QA teams.

Company: Unitelworks Wireless Solutions Pvt. Ltd.

Project: Enterprise Telecom Cloud Migration and Modernization on Azure

Description of Project: Migrated enterprise telecom workloads from on-premises infrastructure to Azure, improving scalability, availability, and disaster recovery.

- Achieved **99.9%+ service availability** through highly available Azure-based telecom infrastructure.
- Ensured reliable voice services by managing VoIP platforms, SIP Trunks, SBCs, and Media Gateways.
- Improved network security through secure traffic segmentation and Azure networking controls.
- Reduced deployment effort by **70%** through automation using Ansible and Python scripting.
- Strengthened disaster recovery readiness through automated backup and failover solutions.
- Reduced incident resolution time through centralized monitoring and standardized runbooks.
- Enhanced system performance and operational visibility using Azure Monitor.

Education

2011 – 2015

B.Tech from Rajasthan Technical University, Kota
